To whom corresponds,

I am writing to apply for the internship opportunity at GeoGuard. I am exceptionally interested in the company not only because of what you do but also on the how.

To be able to seek an opportunity like this does not come every day, as a Media studies major and computer science minor in my studies I have always sought to find alternative and innovative solutions to existent problems. It is not only important to learn how to code for example or to understand code; as it is also important to understand the basis for communication in order to strive for competency and efficiency.

I bring in interest and previous experience in the tech industry as I have worked at Wantoo, a Vancouver start-up where I specifically dealt with user growth and the user journey experience. Having worked there is what led me into getting a minor in computer science as I was not satisfied with only knowing about the front-end concepts but made question on the intrinsic side of building the back-end of a system.

Throughout my studies, I have found myself working in groups and independently and I can affirm I feel very comfortable working whatever way is needed, as an integration of both individual and group work is needed to maintain balance in work efficiency.

Given my studies in media, I can affirm I have dealt with a multitude of communication platforms and I am experienced in social media management, as I am in editing software programs and different coding languages.

Given that in my studies I decided to go for a multidisciplinary approach, I had to develop skills to be quick and adaptable as I had to juggle between arts and science.

I am very drawn in the training plan you can offer me based on my education and work interests, as I want to form part of an innovative and collaborative work culture that aims to build better, bigger, and right.

Thanks in advance, Cecilia Pacheco
